Python Completion

PROJECTS

Research-To-Podcast A **Node.js, Express**, and **EJS**-based web app where users upload research PDFs via Multer; the system summarizes content using a free API and converts it into speech for accessibility.

ChatBot-AI A **Node.js, Express,** and **EJS**-based chatbot web app that takes a user-provided URL, extracts webpage content, and utilizes AI to analyze and answer user questions contextually and accurately.

Item-Manager Developed an item manager mobile app using **React Native**, allowing users to add, update, delete, and view items seamlessly with a clean UI, efficient state management, and smooth cross-platform performance.

Info-Collector Built an info collector web app using **Node.js**, **Express, EJS**, and **Multer** where users can input their skills and upload a profile picture, storing data efficiently for personalized user profiles.

Social-Networking Built a project with **MERN** stack, This is social media platform where you can share posts, react to posts, follow users, and chat with users in real time
